

Nimbus Water Technologies – TW2 or 3 BB20 phased water Filtration system with Ultra Violet

For borehole water, rain water harvesting or municipal back-up water filtration- From source to tank/s – post tank and pump, through twin or triple filtration, 1 or 2 x sediment filtration & 1 x carbon filtration, to 5um and final treatment, Ultra Violet – treating all the water going into the home, lodge, B&B, or commercial office building, on demand. Note for borehole, river or dam water treatment, require a laboratory SANS241/2015 water test certification. The TW2 or 3 BB20-UV system often linked post a water softening, Nitrate removal or Iron/Manganese removal ion exchange system.

Model TW2 or 3 BB	Available with twin or triple filtration to 5 micron
Dimensions/Size	W1100 x H1100 x Depth 300mm & weight at 10kg
Stainless Steel Ultra Violet system with control box	Subject to flow – UV sized for the TW BB20 filtration - a 2720lt/hr/40watt or 5450lt/hr/85watt – larger flow units available.

Raw, un-treated water from borehole or municipal, local water supply

Treated water to usage areas
