

The most widely used technology for safe, great tasting drinking water in the world today.

Remove the entire spectrum of drinking water contaminants through the process of Reverse Osmosis

Unique Identifying Features of the Products

Reverse Osmosis Basics

- The Reverse Osmosis process is the same process that many hospitals throughout the world use to make certain that their pharmaceutical water is of the highest quality
- TDS is the measurement by weight of dissolved materials in a given volume of water. If a material will completely dissolve and is not visible in the water, it is part of the total dissolved solids.
- Reverse Osmosis helps lower the TDS content of water (such as brackish water, or sea water) since substances such as calcium, magnesium and sodium can not readily pass through the seem-permeable membrane, while water can.
- With the assistance of water pressure, impurities are removed and sent down the drain
- A home R.O. system can substantially reduce dissolved metals such as calcium, magnesium, sodium and manganese as well as brackish mineral salts, chlorides, chemicals, germs, radioactive rays, pesticides and other tastes
- The pores in the membrane are about .0001 microns. To give you some perspective, the smallest bacteria is 0.02 micron
- Water passes through the membrane while the dissolved and particulate materials are left behind. As pressure is applied to the concentrated solution, the flow is reversed and water is forced through the membrane from the concentrated side to the dilute side. The central part of the RO system is the module, which is a pressurized container housing the semi-permeable membrane. The product water may then pass into a diaphragm tank which holds the water until it is taken from the discharge faucet by the user
- No electricity is needed. Its compactness allows the system to fit easily in a small area, often under the kitchen sink or in a cabinet.

Stages of Purification

5-Micron Filter

A 5 Micron Filter removes sediment, clay, silt and particular matter to 5 micron range which float or are suspended in water to protect the membrane

Carbon Filter

Removes Chlorine, harmful chemicals, synthetic detergents, as well as other organic contaminants

1-Micron Filter

A 1 Micron Filter removes dead bacteria and particular matter to 1-micron range, which protects the membrane

Reverse Osmosis Membrane

A 0,0001 Micron Reverse Osmosis Membrane eliminates heavy metals, arsenic radioactive materials etc between 90 – 95% TDS.

Separates pure water and waste

Post Filter

Removes odours, chlorine, and bacteria again

Compatibility of the Product with the Promotion of wellness

Imagine one common possible factor that could influence nearly all diseases! Can it be that Arthritis, Kidney Stones, Gall Stones, Arteriosclerosis, enlarged hearts, Emphysema, Obesity, Constipation, Cataracts, and Glaucoma Diabetes – all stem from one common cause?

Unbelievable! But possibly true!

Why the body needs PURE WATER!

The amount of water the body needs depends on temperature, climate, one's activities and health – 8 glasses is average.

When you drink a glass of water it goes straight to your stomach. Part of the water is absorbed directly into your bloodstream through the walls of your stomach and some of the remainder goes to your intestines to keep the food you eat in a liquid state while it is being absorbed; this water is later absorbed directly into the blood.

Drinking the right kind of water is one of your best natural protections against all kinds of virus infections such as influenza, pneumonia, whooping cough, measles and other infectious diseases.

Doctors advise bed rest and plenty of water for the flu.

When the body's cells are kept well supplied with ample water, they can fight viral attacks more efficiently. If the body's cells are water starved, they become shriveled up, parched and dry, making it easy for viruses and diseases to attack.

Always bear in mind the important functions of the right kind of water in your body. Water is a vital component of all body fluids, tissues, cells, lymph, blood and glandular secretions. Water holds all nutritive factors in solution and acts as a transportation medium to the various

parts of the body for these substances. The mucous membranes need plenty of water to keep them soft and free from friction on their delicate surfaces.

Liquid is necessary for the proper digestion of food! The stomach acts as a powerful churn to break down food into tiny particles. Remember to chew your food thoroughly to help your stomach, for it has no teeth

Water! Water! Everywhere – But not a safe drop to drink!

Yes, with all the billions of gallons of fresh, sweet water there is on earth, only a fraction of it is fit to drink. A chemical compound known as H₂O, water is one of the most abundant and widely distributed substances on the surface of the earth.

It occurs naturally in solid, liquid and gaseous states generally known as ice, snow, water and steam vapor. Water composed of hydrogen and oxygen, is contained in varying amounts in all natural foods. It's an indispensable solvent needed in all physiological functions in every form of life.

The body requires water that is 100% pure hydrogen and oxygen, free of toxins and inorganic minerals.

This water comes from Two sources:
first, from fresh, organically grown vegetables and fruits and their juices, which Mother Nature purifies;
second, from water distilled and purified

Sad fact – much of the world’s water today is polluted.

It is difficult to find sources of water from rivers, ponds, lakes, streams and even wells and springs which are not polluted or which do not contain traces of toxic industrial chemicals to some degree.

Therefore, a great deal of toxic chlorine is added to make this water fit to drink.

But is it really “fit to drink?”

Water processing plants use chemical chlorine to destroy the bacteria in polluted water. Alum and many other inorganic chemicals are also used to cleanse polluted water of dirt and filth.

In addition to these inorganic chemicals, a dangerous and misunderstood inorganic substance has been added to drinking water – sodium fluoride.

It’s the worst chemical ever added knowingly to our drinking water, a terrible crime against public health!

Inorganic Versus Organic Materials

There are two kinds of Minerals/chemicals, inorganic and organic.

The **INORGANIC (Dead)** chemicals like chlorine, alum and sodium fluoride cannot be utilized in a healthy way by the living tissues of the body and can only cause harm!

Our body chemistry is composed of 19 **ORGANIC (Living)** minerals, which most come from a living source or one that was once alive.

When we eat an apple or any other fruit or vegetable, that substance is composed of living organic minerals. It has a certain length of life after being gathered from the earth, vine or tree. The same goes for animal foods, fish, milk, cheese and eggs.

Organic minerals are vitally important in keeping us alive and healthy! If we were cast away on a barren, uninhabited island where nothing was growing we would slowly starve to death.

Even though the soil beneath our feet contains 16 **Inorganic minerals**, **our bodies cannot absorb them efficiently enough to sustain life**. Only a living plant has the power to extract inorganic minerals from the earth and to transform them into useful organic substances to nourish our bodies.

For years we've heard people say that certain waters were "rich in all the minerals" What kind of minerals are they talking about? Inorganic or Organic?

Only living plants can convert an **inorganic mineral** into an **organic mineral**.

As you continue to read, you will learn what harm organic minerals can do to your body and brain. Because of dietary deficiencies, some children and young animals try eating dirt. They can become deathly ill, not from the germs in the dirt, but from the inorganic minerals, which can cause sickness and even death!

Dangerous Inorganic Minerals and Toxins in our Drinking water

As previously noted, chlorine, alum and other inorganic minerals such as calcium carbonate, magnesium carbonate and potassium carbonate are used to "purify" our drinking water. Constantly keep in mind that the human body needs hydrogen and oxygen as a natural solvent in its internal chemistry.

WATER-THE UNIVERSAL SOLVENT

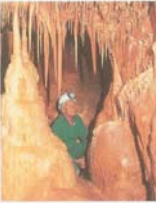

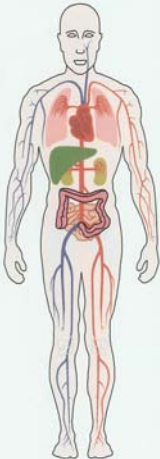

THE HUMAN BODY-MORE THAN 75% WATER

PURE WATER is a Simple & Free Cure for:

- Lower Back Pain
- Diabetes
- Chronic Fatigue Syndrome
- Asthma
- Rheumatism or Arthritis
- Allergies
- High Blood Pressure
- Depression
- High Blood Cholesterol
- Neck Pain
- Alcohol Dependency
- Colitis
- Weight Loss
- Diarrhoea
- Headaches
- Spastic Colon
- Heart & Circulation
- Bones & Joints
- Metabolism

The Impact of Inorganic Mineral Water on our Health.

The most common mineral in ground water is calcium carbonate (lime), which is also a primary ingredient in making concrete and cement. If you have ever seen a large stalagmite or stalactite in a limestone cavern, you can visualize how this hard rock forms, one drop at a time in a cave... or on the inside of your arteries, a kidney stone, in your joints, etc.

If we examined our arteries closely, we could see that calcium carbonate and its affinities are lining these pipes and making them brittle - beginning to turn our body into stone.

Therefore our bodies need a constant supply of **PURE Water**. Where to get it? Even untreated, so-called "pure" water from springs, wells, etc. nearly always contains some traces of inorganic minerals and often other toxic matter.

This is the irony of Mother Nature: that this fluid - without which man can barely exist more than 72 hours before lapsing into a semi-comatose state - contains in most of its forms the exact inorganic chemicals which

bring about the ultimate premature ageing of man and animals. And as stated earlier, the major aluminum companies want to pollute all our water with sodium fluoride, a deadly waste product produced through aluminum processing.

The body is composed ONLY of ORGANIC MINERALS

Remember that these are **ALL ORGANIC - NOT INORGANIC** – minerals.

Although the chemical analysis is the same whether found in air, earth, plant or animal – it is only through the life processes of the plant whereby the constituents of air and soil become vitalized and useful to the human body.

It is this property of vitality, alone which distinguishes, for example, the atom of iron in the red corpuscles of the blood from that inorganic iron or preparations made from inorganic iron. You could suck on an iron nail for years and never extract any organic iron for building your blood.

When you eat blackberries, you are getting organic iron that can be used by the blood. The arrangement of atoms that form a molecule of the iron nail is the same as that of the organic iron in the blackberry.

Only by the great natural miracle force of photosynthesis does the living plant convert the inert inorganic minerals into the organic minerals, which we can use for keeping ourselves alive and healthy!

The fact cannot be over-emphasized that there is a vital change going on in all minerals, as they are absorbed into the structure of the plant.

We must learn to recognize the mineral elements of the body as really being “organic” components – internal parts of the living body and subject to the same vital changes, life and death that affect the organism.

The organic calcium in the skeleton, the organic iron contained in the red corpuscles and the organic sodium and potassium found in the blood serum are biologically organized.

They have a certain duration of life during which they have vital functions to perform.

Sooner or later these molecules will lose their electromagnetic tension, according to the degree of their physiological activity. In other words, they have served their purpose and must be supplanted by fresh organic minerals.

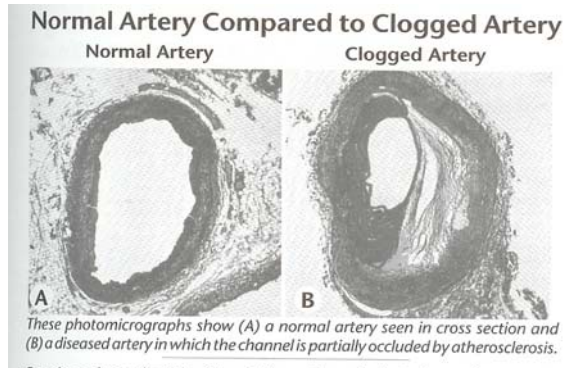

That is the reason that 60% - 70% of your diet should be fresh raw fruits and vegetables. These are the great suppliers of the imponderable life force – vital electricity.

Hardening of the Arteries

There were huge formations created by deposits of the inorganic minerals that are ever-present in most drinking water.

Calcium carbonate, or lime, is a very important ingredient in making cement or concrete.

This catalytic agent is responsible for the hardening of the concrete.

When taken into the body chemistry and subjected to the process of natural metabolism through the years, this mineral becomes the principal troublemaker responsible for what is called “hardening of the arteries” Doctors call this degenerative arterial condition “arteriosclerosis” and most people believe it to be a natural condition that comes with the passing of years.

This is “herd mentality” thinking – or rather, non-thinking!

Very few people question this age-old superstition. Many people accept the fallacy that they must face arteriosclerosis and senility in their golden years.

There is expensive heart vascular surgery and also expensive surgical procedures for cleaning out the inorganic deposits of some of the larger arteries of the body.

But when you consider the extent of the entire pipe system of the human body, cleaning out a small amount could not accomplish a great deal. Miles of arteries, veins and capillaries would have to be cleansed of their inorganic crust to be effective.

Brains turned to stone

The greatest damage done by inorganic minerals is to the small arteries and other blood vessels of the brain. It also causes deterioration of the kidneys, liver, heart and other vital organs of the body.

Essentially, premature ageing and senility are the brain turning into stone!

Visit the large convalescent and rest homes and see with your own eyes the number of people who can no longer reason or think for themselves. Many of them cannot even recognize their own children and relatives!

Millions of people have lost all power of thinking! They often have no control over their eliminative organs and have to wear diapers. Many them have to be hand fed. All the higher functions of the brain are gone. Their eyes stare into space.

Hardening of the arteries and calcification of the blood vessels starts the day you are born, because from birth we begin taking inorganic minerals and chemicals into our bodies.

Kidney Stones

The major cause of most kidney stones is hard, chemicalized water that's saturated heavily with calcium carbonate and other inorganic minerals.

In the Californian desert, there is a subterranean river. When wells are sunk into this river several hundred feet below the earth's surface, the water comes out at 180 degrees.

It's heavily saturated with calcium carbonate and related minerals, such as magnesium carbonate.

People come from all over the world to bathe in the mineral waters at this spa town.

The hot water does have a wonderful curative value. It brings relief to those suffering from arthritis and

The sad part about coming to the hot water resort, however, is that people are also advised to drink this water that's heavily saturated by inorganic mineral water.

It

THE URINARY SYSTEM:

The high concentrations of these inorganic minerals are extremely dangerous!

If you put 5 Litres of this Mineral, Spring or Borehole water in a pan and let it evaporate, a slab of **inorganic minerals** will be left.

Disfiguring Broken Capillaries

Among the many manifestations of **inorganic calcification** are broken facial capillaries.

Study people's faces. Look closely at the cheek, around the nose and on the chin, where you will often see the smallest blood vessels, slender as hairs, showing near the surface of the skin.

When these tiny capillaries become encrusted with inorganic minerals, they expand in size and often rupture, making purplish or reddish blotches.

Blocked by inorganic minerals and no longer able to handle the circulation of the blood, except perhaps to a small degree, these broken capillaries not only give the face a grotesque appearance but are often quite painful.

Cold Feet and Cold Hands

Many people of all ages suffer from poor circulation. In most cases due to or aggravated by **inorganic mineral encrustations** in the arteries, veins and capillaries that constitute the blood circulatory system.

By age 60, most people have patches of small blue, broken and expanded veins around their feet and ankles, giving their legs an appearance of blackness and dirtiness, even just after a bath.

Poor circulation is first and most critically noticeable in the hands and feet because the blood has farther to go from the heart to reach these extremities. When the pipes of the body become clogged and obstructed, the blood has difficulty in getting through. Instead of coursing through the capillaries of the hands and feet in a warm, healthy stream, it trickles through – barely able to bring nourishment, much less any warmth.

Every sick person usually has a sluggish circulatory system that is operating on a very low level – chiefly due to plugged – up pipes. Remember that the main source of these encrustations is drinking water saturated with inorganic minerals. Those who drink purified water and the juices of fruits and vegetables are helping to keep their circulatory systems clean and more healthy.

Build Clean, Healthy Blood

The blood holds the key to our health, vitality and our youthfulness – and our very life! Keep the blood free from inorganic minerals and toxic acids!

Every 90 days we build a brand new bloodstream. We can live and regain health using a reversal program being careful of the kind of water we drink and the kind of foods we eat.

Starting today you can discard the materials, which create an unhealthy bloodstream and start building one that is going to give you a painless, tireless and ageless body!

Of course, we all know what blood looks like....a somewhat thick red fluid that we see whenever the skin is even slightly broken. These tiny oozings of blood come from very tiny blood vessels, which supply the skin all over the body.

Blood, your “River of Life”, is the fluid, which carries oxygen and nutrition to all the cells of the body and tries to remove any poisonous substances.

The trouble is that the average person is pouring inorganic minerals and toxic poisons into the body so fast that the blood finds it impossible to purify itself much less the body. Nothing could be more important than this “life blood” of ours. If we do not get enough oxygen and nutrition and if toxic materials are not removed regularly, they will stockpile and we will die.

And that, we’re sorry to say, is why most die long before their time. Death comes from accumulated toxins that actually poison and clog up the bloodstream, brain, organs, and nerves.

The heavy concentrations of inorganic minerals, salt, fat and toxic poisons, which are a burden to the body, are the vicious killers!

Years are not your enemies!

It’s what you put into your body that does the terrible damage to your health and erodes your future longevity!

Mankind is Sick and Growing Sicker

Throughout the whole of recorded history, man has suffered with a variety of miseries, a great many of which can be directly traced to hard, inorganic mineral water.

Every time a person turns on the water faucet and drinks water that has been chemicalized with chlorine or is saturated with calcium carbonate and other inorganic minerals, he is jeopardizing his health, his mind and his life!

We offer Complete Distribution, Maintenance and Installation on all products and water treatment systems.
